

**The French Society of Radiology
(SFR, Société Française de Radiologie) has created
its Research and Education Foundation:**

ISFRI*

INSTITUTE FOR THE SUPPORT OF
RESEARCH AND EDUCATION IN DIAGNOSTIC
AND INTERVENTIONAL IMAGING

Health is a major challenge in our society; today it is considered to be a basic right for all French people; radiologists play an essential role in all phases that guarantee the citizens' health: prevention, screening, prognosis, diagnosis, treatment, follow-up and accommodation.

ISFRI goals:

Participate in financing research and education in diagnostic and interventional imaging in order to:

- **Improve the way patient costs are taken care of**, by making the security of the techniques as well as their performance optimal
- **Promote imaging research** by supporting medical education and research projects, especially that of **young radiologists**
- Promote medical and economic studies about the impact on health in association with **health authorities**
- Contribute to the **development and exposure of French or Francophone imaging** by supporting international projects
- Support initial and continuous education of the principal people involved in imaging
- Develop and structure the **collaboration between radiologists and clinicians** about good practice.

ISFRI needs your support!

Donations from individuals and companies are tax deductible.
